PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience designing and shipping **distributed backend systems** in **Java** and **Spring Boot**, from enterprise **API gateway** and **batch processing** platforms to a regulated fintech **order-execution** platform. Strong foundation in **AWS**, **microservices**, and **performance optimization**, with hands-on **LLM/RAG** product experience.

SKILLS, TOOLS & CERTIFICATIONS

Languages & Frontend: Java, Python, SQL, JavaScript, TypeScript, React, Node.js, Express.js, HTML5, CSS, Tailwind CSS
Backend: Spring Boot, Spring Batch, Spring Data JPA, Spring Cloud Gateway, REST APIs, API Gateway, gRPC, Spring AI
Architecture: Microservices, Distributed Systems, Fault-Tolerant, Event-Driven, System Design, API Design, Design Patterns
Cloud & DevOps: AWS (EC2, S3, RDS, Lambda, CloudWatch, OpenSearch), Docker, Kubernetes, Terraform, Jenkins, CI/CD
Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, pgvector, Kafka, RabbitMQ, Flyway, Query Optimization
Testing & Monitoring: JUnit, Mockito, TDD, Unit/Integration Testing, Git, GitHub Actions, Packer, ELK Stack, Monitoring
AI, CS & Practices: LLM Integration, RAG, DSA, OOP, SOLID, Agile/Scrum, SDLC, Code Reviews, Pair Programming
Certifications: AWS Certified Solutions Architect | Spring Professional Certification | Claude Certified Architect

WORK EXPERIENCE

- Software Engineer, [ServiceNow](#), MA** **Sept 25 – Apr 26**
- Reengineered the **RESTful API gateway** layer with **Spring Cloud Gateway**, consolidating **45+** downstream endpoints and cutting client-side call latency **38%** while processing **3.2M daily requests** at **99.95%** uptime.
 - Built a fault-tolerant data synchronization engine using **Spring Batch** and **AWS S3** that processed **1.2M+** workflow records nightly, reducing batch completion time **61%** through parallel **chunk processing** and skip-error handling.
 - Redesigned a high-traffic caching strategy with **Redis** using a **cache-aside pattern** and **TTL tuning**, improving cache hit ratio **from 62% to 89%** and reducing database load **44%** for enterprise reporting dashboards.
 - Implemented centralized logging and **monitoring** with the **ELK stack** across **8 microservices**, adding dashboards and alerting that cut mean time to detection for production anomalies **from 14 minutes to under 4**.
 - Optimized **MySQL** query performance through **composite indexing** and query refactoring across reporting workloads, accelerating page load times **52%** and improving user satisfaction scores **27%** over six months.
- Software Development Engineer, [Bhardwaj Tech IT Solutions Pvt Ltd](#), Gurugram, India** **Mar 22 – Jul 24**
- Architected a scalable **order-execution platform** for a mutual fund client across **5** order types (SIP, SWP, STP, lump sum, redemption), scaling to **6,000 orders/day** with end-to-end validation, placement, and reconciliation.
 - Built **10+ RESTful APIs** in **Java** and **Spring Boot** for fund listings, advanced filtering, and live graph data, integrating third-party **exchange APIs** with transaction-safe order placement across high-volume trading flows.
 - Reduced API latency **from 650ms to 180ms** through **Redis caching**, **connection pooling**, and **SQL query optimization**, improving real-time order placement for **1,000+** concurrent users during peak market hours.
 - Engineered fault-tolerant **microservices** with automated **CI/CD** pipelines, **Docker** containerization on **AWS (EC2, RDS)**, and production monitoring, sustaining **99.9%** uptime and cutting deployment time **55%** in a regulated fintech environment.
 - Designed a resilient data reconciliation pipeline using **Java** and **Spring Batch**, processing **1M+ records/day** from **Amazon S3** and querying **OpenSearch APIs** to detect missing order IDs with retry logic and exception handling.
 - Shipped **25+ full-stack production features** using **React**, **JavaScript**, and **Node.js**, implementing **API gateway patterns** and **service discovery** for reliable communication across a distributed system.

PROJECT EXPERIENCE

- TAssist: AI-Powered Course Doubt Resolution Platform** [GitHub](#)
- Developed a full-stack AI platform serving **2 user roles** (TA/student) with **RAG-grounded answers streamed in real time**, freeing **8 hours/week** previously spent on repetitive manual doubt resolutions.
 - Implemented the ingestion pipeline using **Apache POI** for PPT extraction into **PostgreSQL + pgvector** via **Spring AI** and **Anthropic Claude**, with a **React + TypeScript** frontend delivering slide-level citations across **100+ slides**.
- OpenLens: AI-Powered Open-Source Contribution Guide Generator** [GitHub](#)
- Launched an AI-powered platform generating personalized open-source contribution guides through **LLM integration**, analyzing **100+ issues and merged PRs** per repository to cut contributor onboarding from **1+ hours to under 10 minutes**.
 - Architected in **Java 21** and **Spring Boot 3.2** using **hexagonal architecture**, with asynchronous **GitHub API** ingestion via **Kafka**, **PostgreSQL + Flyway** for migrations, and **Redis** caching to accelerate repeated lookups.
- Cloud-Native Auto-Scaling Infrastructure** [GitHub](#)
- Architected multi-environment cloud infrastructure with **Terraform** and **AWS** (VPC, EC2, RDS, ALB), provisioning fault-tolerant **multi-AZ** deployments with **IAM** roles and **KMS** encryption to sustain **99.9%** availability under load.
 - Automated an end-to-end **CI/CD** pipeline using **GitHub Actions** and **Packer** for custom AMI builds, adding **CloudWatch** monitoring, **StatsD** metrics, and centralized logging to cut deployment cycles **~65%** through full **IaC** automation.

EDUCATION

- [Northeastern University](#), Boston, MA** **May 2026**
Master of Science in Computer Software Engineering | GPA: 3.75 / 4.00
- [Guru Gobind Singh Indraprastha University](#), Delhi, India** **July 2023**
Bachelor of Technology, Computer Science | GPA: 3.5 / 4.00
